

goLITE BLU

Fact Sheet

The goLITE BLU takes light therapy to a higher level. While retaining many standard essential light therapy features, this newest offering incorporates advanced features and improved aesthetics to help create an easier and more comfortable experience from beginning to end.

Important new features and benefits of the goLITE BLU:

Feature	Benefit
Diffusion optics with a patented deflection system that eliminates pointalization and contrast problems found in traditional LED lights.	A soft, even, comfortable light with no harsh glare to help minimize eyestrain and headaches.
Wider treatment field that provides ample light at various angles (more than twice that of our goLITE legacy products).	Provides the freedom to be more active and perform other activities during treatment, such as computer work, reading, watching TV, etc.
Completely redesigned to be more compact, lighter weight and sleek.	Easier for using, storing and traveling; fits in better with room or office décor.
Backlit touch screen.	Easier to set various functions.

The goLITE BLU retains many of the essential features and benefits of our other goLITE models:

- Advanced Bluewave technology to provide the optimal wavelength of blue light for regulating mood, energy and sleep levels
- Helps improve sleep patterns such as early/late sleeping
- A natural alternative to drugs or artificial stimulants
- Benefits can be experienced in a few days with just a few minutes of use a day
- Adjustable light intensity to enable individual settings
- Built-in clock with treatment timer
- No UV or near UV light
- Rechargeable battery
- Long-lasting eye-safe LEDs
- Protective storage case for easy storing or traveling
- Passes government and industrial ocular safety testing
